Re: Water / Sewer Capacity for Conversion from Single Family Home to Duplex at 1288 North Avenue

Dear Kim,

This letter is to inform you, your client, the State of Vermont Environmental District and other interested parties that the City of Burlington's water and wastewater facilities have sufficient capacity to handle flows associated with a residential conversion at the above address. Since this project (from our discussion) involves a change from a four (4) bedroom house to a two (2) bedroom duplex we believe there will be no change in water or sewer flows.

Flow from this area is treated at our North Wastewater Plant located on North Avenue. It is important to note that this letter only addresses treatment plant and not distribution or collection system capacities.

This letter is good for one (1) year from the date of writing. If this letter is not filed with the proper offices, or if the proper permits are not obtained within that year, you will need to reapply. Any changes in flow estimates or property usage also requires reapplication. Please feel free to call me at 343-0125 if you have any questions.

Sincerely,

A handwritten signature in black ink, appearing to read "S. Roy", written over a horizontal line.

Steve Roy, P.E.
